

Are You Ready?

Let Us Help You Get Back to Work.

As you maintain the day-to-day activities of your business, we know you have a lot to consider. While you concentrate on the needs of customers and employees, let us help you ensure that your building and technology stay up and running without interruption. As you get ready for the change of season, now's the perfect time to swap out any dead light bulbs you have in your facility and test the batteries in crucial equipment like generators and smoke detectors.

Here's a quick checklist of things to consider:

- Smoke & carbon monoxide detectors:** Test their batteries and be sure to replace any detectors that are no longer working.
- Backup power systems & generators:** Have you tested the batteries in your generator recently?
- Uninterruptible Power Source (UPS) Units:** Make sure your UPS batteries are still good. Also, review your logs and complete any necessary maintenance.
- Automatic soap dispensers in restrooms & kitchens:** Are they slow to dispense? We recommend keeping a backup supply of batteries for touch-free applications.
- Automatic towel dispensers in restrooms & kitchens:** Be sure you have an adequate supply of replacement batteries on hand.
- Thermometer batteries for staff & client checks:** Maintain an adequate supply of backup alkaline or coin cell batteries.
- Scrubber/sweeper:** Have you checked the fill levels? Are the batteries charged up and ready to go?
- Tablets & laptops:** Do you have any tablets in need of repair? Does your staff have laptop batteries and chargers to power their devices if they have to work from home?
- Exit and emergency lighting:** Is everything working the way it should?
- Outdoor lighting:** Is there an adequate amount of exterior lighting in parking lots and other common areas? Make sure all bulbs & fixtures are functioning properly.
- Are you still using incandescent bulbs, or other inefficient lighting?** Now might be the time to switch to LED lighting, which is more efficient, longer-lasting and offers a better ROI.

If you need any assistance - battery testing or even an in-person or virtual site walk - to ensure that all of your power and lighting needs are taken care of, we're here for you. Just give our team a call.
