

SLA Battery Charging Best Practices

- Always recharge your battery after every use.
- Charge your battery in a well ventilated area.
- Use a charger that has the appropriate voltage output for your battery.
- When not using an automatic charger, disconnect the charger immediately once the battery is fully charged.
- Store your battery fully charged during the off season or when not used for a longer period of time.
- When storing an SLA battery, keep it in a cool, dry place like a garage.
- Do not store an SLA battery in a discharged state.
- A lead battery will lose charge at a rate of roughly 5% per month. When storing a battery, check its charge every couple of months and top off as needed if not connected to an automatic charger/maintainer.
